DETAILED ACTION

Drawings

1. The drawings are objected to because figure 3 is illegible. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

2. Applicant is reminded of the proper language and format for an abstract of the disclosure, with particular attention paid to the bolded section below.

The abstract should be in narrative form and **generally limited to a single paragraph** on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

Art Unit: 3765

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 9-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hedegaard (6701756) in view of Mustacich et al (6490852).

Hedegaard teaches a method for securing a fur on a pelting board which is temporarily fastened in a pelting board holder, wherein the fur is stretched on the pelting board to a desired length and fixed thereto without damaging the fur (Abstract; Figure 4). While Hedegaard essentially teaches the invention as detailed, he fails to specifically teach wrapping an elastic (inherent of the material taught) band around the central material via a displaceable winding unit having a stoppable supply reel and movable around the central material on a guide ring, which Mustacich teaches (Figure 1). It would have been obvious to one of ordinary skill in the art, at the time the invention was made, to have utilized such a winding mechanism, so as to temporarily fasten a material in a known manner. Hedegaard teaches using a sleeve to hold the fur in place without damage, but the ordinarily skilled artisan would have understood that any manner of product could be used that would create a pressure on the outside of fur against the pelting board to temporarily fasten them, including wrapping a length of elastic material. Mustacich teaches us that such mechanisms to wrap elastic material are already known and

understood, and the ordinarily skilled artisan would have found it obvious to try combining the two, so as to create a temporary fastening means for the fur to the pelt. In regards to the band locking to itself, knot tying is well known and well within the ordinarily skilled artisan's abilities.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Hedegaard (20030019255), Phillbrick (2232885), Black et al (5564293), Jonas (2942448), Goekler et al (4461429), Ferree (4346550), and British Patent (2211203) all teach what is well known in the art.
